DETAILED ACTION

1. This is the second Office action on the merits of Application No. 10/809,713, filed on 26 March 2004. Claims 1-8 are pending.

Documents

2. The following documents have been received and filed as part of the patent application:
- Foreign Priority Document, received on 03/26/04
 - Information Disclosure Statement, received on 03/26/04

Election/Restrictions

Claims 1-3 and 5-7 are directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(B), claim 4, previously withdrawn from consideration as a result of a restriction requirement, is hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, the restriction requirement as set forth in the Office action mailed on 08 August 2005 is hereby withdrawn. In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claims including all the limitations of an allowable product claim or rejoined process claim are presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

3. Claims 1-8 are allowed.
4. The following is an examiner's statement of reasons for allowance:

Claim 1:

The prior art of record fails to show or render obvious an internal teeth oscillating inner gearing planetary gear system comprising a driving source-end pinion, an external gear, an internal gear, a plurality of eccentric shafts, a plurality of corresponding eccentric shaft gears, and a transmitting external gear, as recited in the claim; specifically, wherein the plurality of eccentric shafts oscillatingly rotate the internal gear and the transmitting external gear concurrently meshes with the eccentric shaft gears and the driving source-end pinion.

Claim 8:

The prior art of record fails to show or render obvious a driving method of an internal teeth oscillating inner gearing planetary gear system including an internal gear and an external gear, as recited in the claim; specifically, wherein the method includes the steps of concurrently rotating the eccentric shafts, on which the respective eccentric shaft gears are incorporated, by rotation of the plurality of eccentric shaft gears, and oscillatingly rotating the internal gear by the concurrent rotation of the plurality of eccentric shafts.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
